

# Electronic Statement Organizer with User Interface and Integrated Bill Payment

## Abstract

A software product, computer implemented method, and system that enable individuals to access, download, organize, store, and retrieve electronic statements and other account notices with a computer via a communication network. The stored statements are organized by their corresponding accounts and cataloged in a storage system enabling the user to search, retrieve, and manage statements and account information. This, in turn, simplifies downloading of account information, organization of that information, subsequent retrieval of such information and integration of such information into other financial management applications and bill payment applications. The system embodiments include a plurality of interfaces, storage systems, and integration of personal or business financial management software and bill payment systems.
